The segmental anisotropy of polystyrene derivatives
was measured by the method of flow birefringence.
Analysis of the experimental data indicates that the
nature of rotation of the side groups may be considered
to be the same in molecules of poly-p-chlorostyrene,
poly-2,5-dimethylstyrene, and polystyrene. This as-
sumption does not satisfy the experimental findings for
poly-2,5-dichlorostyrene. In this case the extent to

The preliminary results of the study of the flow
birefringence of macromolecular RNA (ribonucleic acid)
solutions are described. The RNA was isolated from a
transplantable mucous carcinoma of the liver. An op-
tical apparatus with a half-shaded condenser was used
for studying the flow birefringence of the RNA solutions.
